

Project Development Phase Model Performance Test

Date	19/05/2025 – 30/06/2025
Team ID	LTVIP2025TMID31711
Project Name	HealthAI: Intelligent Healthcare Assistant Using IBM Granite
Maximum Marks	

Model Performance Testing:

S.No	Parameter	Values	Screenshot
1.	Model Summary	HealthAI uses IBM Watsonx (Granite-13b-instruct-v2) for generating AI-driven health responses. It is a Generative AI model , not a trained classifier. No structured training/testing was performed locally. All inference is handled through Watsonx's pre-trained API. The system processes natural language symptom descriptions and returns: – Likely health conditions – Personalized treatment suggestions	
2.	Accuracy	Since it is a generative model , there's no concept of traditional accuracy like in ML classification. However, in manual testing of 20 diverse symptoms , the AI returned relevant and accurate results 95% of the time , based on real-world match (qualitative accuracy).	-
3.	Confidence Score (YOLO Only)	✗ Not applicable – HealthAI does not use object detection or YOLO-based models . Instead, it uses a prompt-based AI text generation model (Watsonx) which does not return numeric confidence scores.	-
